

Intersurgical Resuscitation and Emergency Care Products

Edition 11

Introduction

Intersurgical is a leading designer, manufacturer and supplier of a wide range of medical devices for respiratory support.

We provide flexible patient solutions for airway management, anesthesia, critical care, and oxygen & aerosol therapy for use within emergency care, the hospital environment and also in the home.

With over 30 years experience in this area, we understand the changing and challenging clinical environments and needs of our customers and their patients.

We believe the best way to maintain the highest standards in design, manufacture, quality and customer care is to have complete control of these aspects of our business. This integrated in-house philosophy means we are able to respond quickly and effectively to our customers and consistently meet their requirements.

Innovation is an important aspect of our business in all areas, helping us to deliver high quality products and services while allowing us to provide cost-effective solutions to meet today's needs.

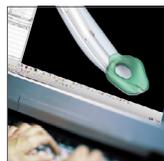

Maintaining these high standards is paramount in everything we do: for our employees, clinicians and patients alike. Driven by these core principles and a commitment to care, Intersurgical is a company you can trust.

With high volumes of products manufactured weekly, quality has to be designed into all aspects of our products, from concept through to final manufacture, incorporating automatic testing to ensure product integrity.

Intersurgical is certified to meet the Quality Management System requirement of ISO 13485. Intersurgical is an FDA registered and inspected company with adherence to the Quality System Regulations.

We are also committed to lowering the environmental impact of our products and services and have implemented an Environmental Policy.

Be assured we can provide a solution for your needs.

Our company goal:

'To provide best practice respiratory product solutions for patients and clinicians, offering quality, innovation and choice'

i-gel[®] O₂ Resus Pack

For use in anesthesia and resuscitation

The i-gel[®] O₂ Resus Pack puts the things you need at your fingertips. The pack contains an i-gel[®] O₂ 2nd generation supraglottic airway, with an easily removable protective cradle containing a sachet of lubricant and airway support strap, all packaged in a specially designed clear, sterile and rigid pack. This unique design ensures protection of the contents, both in transit and in storage. The i-gel[®] O₂ has a color-coded hook ring to allow quick and easy identification of size. The i-gel[®] O₂ Resus Pack is available in three adult sizes.

Pack contents

Supplementary oxygen port

For the administration of passive oxygenation as a component of cardiocerebral resuscitation (CCR)

Color-coded hook ring

To secure the i-gel[®] O₂ in position with the airway support strap

Code	Description	Weight	Qty.
8705030	i-gel [®] O ₂ Resus Pack, large adult – includes a size 5 i-gel [®] O ₂ with orange hook ring, sachet of lubricant and airway support strap	90+kg (200+lbs)	6
8704030	i-gel [®] O ₂ Resus Pack, medium adult – includes a size 4 i-gel [®] O ₂ with green hook ring, sachet of lubricant and airway support strap	50–90kg (110–200lbs)	6
8703030	i-gel [®] O ₂ Resus Pack, small adult – includes a size 3 i-gel [®] O ₂ with yellow hook ring, sachet of lubricant and airway support strap	30–60kg (65–130lbs)	6
8800000	Airway Support Strap		40

i-gel[®] O₂ Resus Pack

15mm connector

Reliable connection to any standard catheter mount or connection

Proximal end of gastric channel

Color-coded hook ring

To secure the i-gel[®] O₂ in position with the airway support strap

Clearly displayed product information

For quick easy reference. Includes confirmation of size and weight guidance

Position guide

(adult sizes only)

Supplementary oxygen port

For the administration of passive oxygenation as a component of cardiocerebral resuscitation (CCR)

Gastric channel

Enhances patient safety by providing a mechanism for the management of regurgitant fluid

Integral bite block

Reduces the possibility of airway channel occlusion

Buccal cavity stabilizer

Aids insertion and eliminates the potential for rotation

Epiglottic rest

Reduces the possibility of epiglottis 'down folding' and airway obstruction

Non-inflating cuff

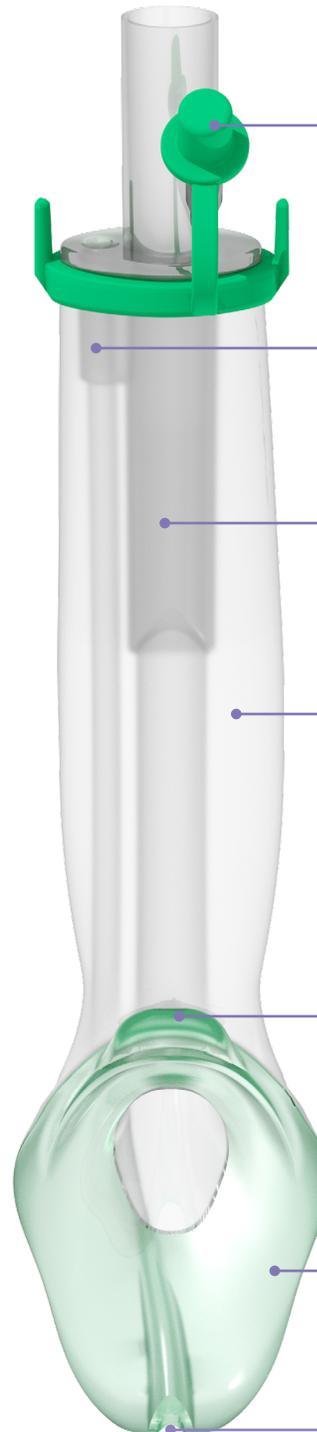

Eliminates the need for cuff inflation after insertion, allowing easy and rapid insertion

Distal end of gastric channel

The i-gel[®] O₂ Resus Pack is available in 3 adult sizes and includes:

- i-gel[®] O₂ supraglottic airway
- Sachet of lubricant – for quick and easy lubrication of the i-gel[®] O₂ prior to insertion
- Airway support strap – to secure the i-gel[®] O₂ in position

In emergency medicine, you need equipment that's easy, rapid and reliable to use. The i-gel® O₂ Resus Pack contains everything you need to prepare, insert and secure the i-gel® O₂ quickly and efficiently: an i-gel® O₂ supraglottic airway, a sachet of lubricant and an airway support strap.

The i-gel® O₂ incorporates a supplementary oxygen port and an integral hook ring for securing of the airway support strap.

The i-gel® O₂ has been designed to facilitate ventilation as part of standard resuscitation protocols, such as those designated by the European Resuscitation Council (ERC) and the American Heart Association (AHA). However, the i-gel® O₂ incorporates a supplementary oxygen port, so that it can also be used for the delivery of passive oxygenation, or Passive Airway Management (PAM™), as part of an appropriate CardioCerebral Resuscitation (CCR) protocol.

Airway innovation since 2007

i-gel® is the innovative second generation supraglottic airway device from Intersurgical launched in 2007. The first major development since the laryngeal mask airway, the i-gel® changed the face of airway management and is now widely used in anesthesia and resuscitation around the world.

The non-inflating cuff

The i-gel® gets its name from the innovative soft, gel-like material from which it is made. It is the innovative application of this material that has enabled the development of a unique non-inflating cuff. This means there is no need for cuff deflation prior to insertion

and no cuff inflation after placement in order to secure a seal, which shortens and simplifies the preparation and insertion procedure.

Insertion

The i-gel® O₂ is incredibly easy to use. Insertion is rapid and can normally be achieved in less than 5 seconds, by a proficient user. The simplicity of i-gel® O₂ means the insertion technique is instinctive, reliable and does not require or benefit from the insertion of fingers or thumbs into the patient's mouth.

Fixation

The i-gel® O₂ Resus Pack includes a specially designed airway support strap for securing the i-gel® O₂ in position. Fixation is easily achieved by sliding the strap under the patient's neck and securing it in place with the hook ring on the collar of the i-gel® O₂. This makes it ideal for use where adhesive tape is unsuitable, such as on patients with facial hair.

Pediatric i-gel[®] supraglottic airway

i-gel[®] is a truly unique, single use, latex and PVC free 2nd generation supraglottic airway management device that represents the culmination of years of extensive research and development. Made from a medical grade thermoplastic elastomer, i-gel[®] has been designed to create a non-inflating, anatomical seal of the pharyngeal, laryngeal and perilaryngeal structures while avoiding compression trauma. The pediatric i-gel[®] is currently available in four sizes and is supplied in an innovative, color-coded polypropylene protective cage pack.

Code	Description	Size	Weight	Qty.
○ 8225000	i-gel [®] , large pediatric, supraglottic airway	2.5	25–35kg (55–77lbs)	10 
● 8202000	i-gel [®] , small pediatric, supraglottic airway	2	10–25kg (22–55lbs)	10 
● 8215000	i-gel [®] , infant, supraglottic airway	1.5	5–12kg (11–25lbs)	10 
● 8201000	i-gel [®] , neonate, supraglottic airway	1	2–5kg (5–11lbs)	10

One-piece Guedel airways

Safer by design

Our Guedel airway combines two materials with very different physical characteristics into one molding. Our one-piece design eliminates the separate bite block found in all conventional Guedel airways. Loose or detached bite blocks can constitute a real threat to patient safety. Our one-piece design overcomes all of the associated risks, as well as improves safety. The one-piece also incorporates a soft tip, reducing the risk of trauma to the patient.

ISO 5364:2016 – Color coding guidance

In the most recent version of the ISO standard for Oropharyngeal Airways, ISO 5364:2016, a new color coding requirement was implemented, aiming to improve patient safety and provide consistency across products from different manufacturers. In order to comply with the color coding system specified in ISO 5364:2016, it was necessary for Intersurgical to update four sizes of Guedels. Details regarding the sizes that have changed can be viewed in the table below.

Code	Description	Size	ISO	Previous Color	NEW ISO Color	Qty.
1115120	One-piece Guedel airway, purple, 120mm	5	12.0	Purple	Purple	70
1114100	One-piece Guedel airway, red, 100mm	4	10.0	Red	Red	90
1113090	One-piece Guedel airway, orange, 90mm	3	9.0	Orange	Yellow	90
1112080	One-piece Guedel airway, green, 80mm	2	8.0	Green	Green	100
1111570	One-piece Guedel airway, yellow, 70mm	1.5	7.0	Yellow	White	100
1111065	One-piece Guedel airway, white, 65mm	1	6.5	White	Brown	80

Introducing the Universal Stylet Bougie (USB™)

A hybrid stylet and bougie in one simple to use device

The Universal Stylet Bougie, or USB, represents a significant advance in the design and development of tracheal introducers (bougies) and stylets.

Traditionally, the design requirements of stylets and bougies have always been considered incompatible. A stylet requires sufficient rigidity to allow the tracheal tube to be manipulated to and maintained at a variety of angles, whereas a bougie needs to be flexible enough to allow positive tracheal ring feedback while incorporating specific memory characteristics to allow correct placement.

The unique design of the USB incorporates two metal inserts with different and distinct properties in-between a more flexible middle section. The USB can easily be manipulated to a variety of angles when used as a stylet, yet has the flexibility when used as a bougie to provide a significantly enhanced level of tracheal ring feedback.

In addition, the hexagonal shape provides less contact with the inner surface of the tracheal tube, providing particularly easy insertion and removal.

Key features

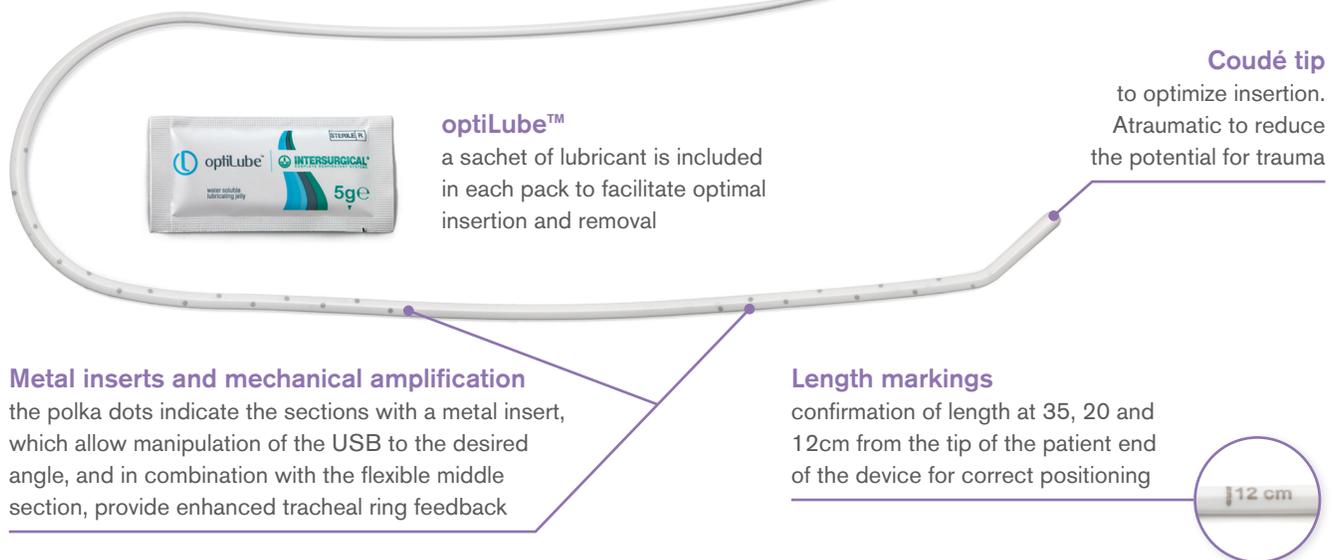

Low friction hexagonal shape
for optimal insertion and removal

Device information
confirmation of size, diameter and other key product details

Flattened (non-patient) end
allows the user to insert the end of the USB back into the connector of the tracheal tube to retain product position

Coudé tip
to optimize insertion. Atraumatic to reduce the potential for trauma

optiLube™
a sachet of lubricant is included in each pack to facilitate optimal insertion and removal

Metal inserts and mechanical amplification
the polka dots indicate the sections with a metal insert, which allow manipulation of the USB to the desired angle, and in combination with the flexible middle section, provide enhanced tracheal ring feedback

Length markings
confirmation of length at 35, 20 and 12cm from the tip of the patient end of the device for correct positioning

Key benefits

The USB offers a number of key advantages over traditional bougies and stylets

Hybrid bougie and stylet — the unique design of the USB means the device can be used as a stylet or as a bougie.

Easier insertion and removal — the unique hexagonal shape of the USB provides less contact and interference with the tracheal tube ensuring the device can be easily inserted and removed. The hexagonal shape also provides optimal grip and eliminates the potential for rolling.

Easier storage — the folded design and smaller footprint of the USB makes it easier and more convenient to store than traditional stylets and bougies. It also ensures orientation of the device is always clear.

Improved tracheal ring detection — when there is a restricted laryngeal view, it is not always possible to visually determine whether a bougie has been correctly placed into the trachea. In such circumstances, immediate feedback as to whether placement has been successful can be obtained by determining whether the tracheal rings can be felt as the bougie is moved backwards and forwards. This is the same for the USB, except its unique design, incorporating a flexible section positioned between two inserts with different metallic properties, provides an enhanced level of amplification and tracheal ring detection not usually seen with traditional bougies.

Using the USB™

Ideal for both pre-hospital and in-hospital use

The USB can be used in the pre-hospital as well as the in-hospital environment. In the pre-hospital setting, the folded design and smaller pack makes it easy to store in emergency vehicles and rescue backpacks or kits without any compromise to the integrity or shape of the device. The hybrid bougie and stylet design also eliminates the need to carry separate devices of each type, while retaining both clinical options.

Using the USB as a stylet

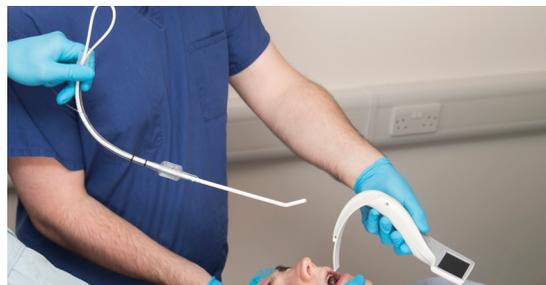

- The hexagonal shape provides less contact with the Tracheal Tube and it is therefore easier to remove the USB from the Tracheal Tube once correct placement has been achieved.
- The flexible section between two metal inserts makes the overall device less rigid than many stylets, reducing the potential for trauma.

Using the USB as a stylet

Using the USB as a bougie

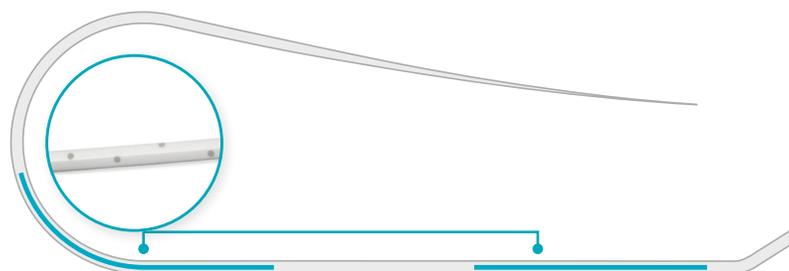

- Increases amplification, providing superior tactile ring feedback and detection
- Hexagonal shape and folded design provides continuous confirmation of product orientation
- The proximal end of the USB can be folded into the Tracheal Tube to prevent accidental movement until the point where the Tracheal Tube is to be railroaded over the USB.
- It can be used in a variety of configurations, allowing flexibility in use and the possibility to use the device without the need for an assistant.

Using the USB as a bougie

Adjusting the USB to the desired angle

The USB has two metal inserts which can be bent to create the desired angle. The polka dots indicate where the metal inserts are located.

Introducing the i-view™ video laryngoscope

One size ▪ Single use ▪ Fully disposable

i-view is the new, single use, fully disposable* video laryngoscope from Intersurgical, providing the option of video laryngoscopy wherever you might need to intubate.

By incorporating a Macintosh blade, i-view can also be used for direct laryngoscopy. The technique for insertion is more familiar and instinctive than for devices with a hyper-angled blade.

i-view is ready to use seconds after removing from the packaging. The ergonomic design ensures i-view is easy to use, and the integral LCD screen provides an optimal view in a variety of light conditions.

i-view provides the opportunity of video laryngoscopy 'whenever and wherever you might need to intubate'

The availability of a video laryngoscope may be limited due to the cost implications of purchasing reusable devices for multiple sites. By combining all the advantages of a fully integrated video laryngoscope in a single use, disposable product, i-view provides a cost effective solution.

i-view is ideal for use in:

- pre-hospital
- emergency medicine
- resuscitation
- anesthesia
- difficult airway
- intensive care

Intensive care

Pre-hospital/resuscitation

Difficult airway

*The Intersurgical i-view is a single use, fully disposable device. Disposal should be in accordance with normal procedures for clinical waste, including landfill or incineration. Local protocols or regulations should be followed when disposing of i-view.

Why use a breathing filter?

Breathing filters are designed to prevent microbial cross contamination via anesthetic or ventilator breathing systems. Their use is now widely recognized as beneficial and is recommended by a number of Anesthetic Associations¹.

The threat to patients is varied

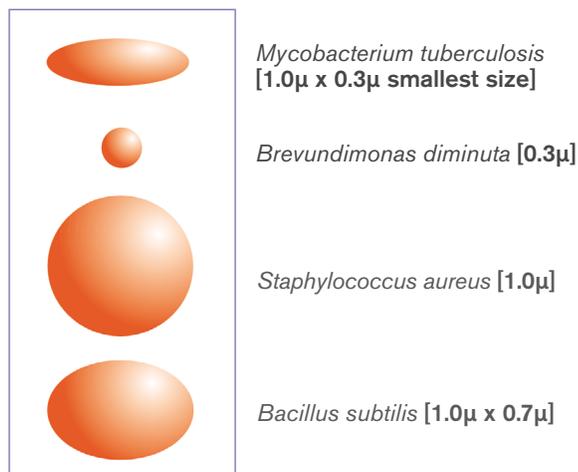

Patients undergoing anesthesia may be threatened by cross contamination via the equipment or systems used earlier on an unsuspected but infective case. Documented areas of concern regarding infection from breathing systems include *Hepatitis C* and *Mycobacterium tuberculosis*.

Long-term ventilated patients may be at risk from pseudomonal growth in a water bath humidifier. Staff too may be at risk from atmospheric pollutants via ventilator exhausts. The strategic use of an effective breathing filter protects both the patient and equipment bidirectionally. The inclusion of a filter in a breathing system is often beneficial in financial terms since the ventilator is protected against potential cross contaminants generated by the patient.

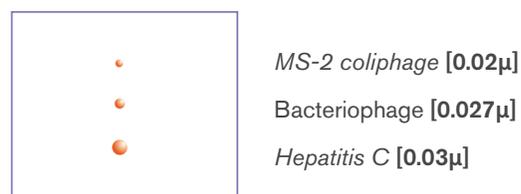

Proven efficiency

The Intersurgical range of breathing filters has been designed for the protection of the patient, breathing system and equipment. They have been independently tested and proven to be highly efficient in preventing the passage of bacteria and viruses.

Potential infectious bacteria [Particle sizes μ microns]

Potential infectious viruses [Particle sizes μ microns]

Features of Intersurgical breathing filters

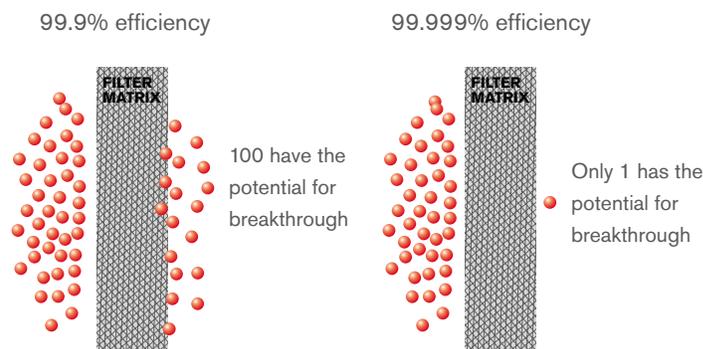

The Intersurgical range of breathing filters offers a choice of pleated and electrostatic filters, providing the most appropriate product for each clinical situation.

- Validated filtration efficiency²
- Proven filtration against *Mycobacterium tuberculosis* and *Hepatitis C*
- Proven efficiency not affected by anesthetic agent
- Safe inert material
- Option of patient connections – supplied packaged and ready for use
- Lightweight – reduces patient trauma
- Low volume – reduces rebreathing of CO₂
- Low resistance to flow

The CDC has recommended the use of HEPA filters (99.97% minimum efficiency at 0.3 micron particle size). Intersurgical offers a wide variety of breathing filters ranging from >99.9999% efficiency at 0.027 microns to a standard >99.9% efficient filter.

us.intersurgical.com/info/filtrationandhumidification

Filtration Efficiency based on a challenge of 100,000 Microbes

1. Association of Anaesthetists of Great Britain and Ireland 1996. Danish Society of Anaesthetists 1998. French Society of Anaesthetists 1998.

2. All filters are independently validated for filtration efficiency at the Health Protection Agency, Porton Down, Salisbury, Wiltshire, U.K and Nelson Laboratories Inc, USA.

All quoted performance figures are mean values.

The breathing filter range

The Intersurgical range of breathing filters has been designed for the protection of the patient, breathing system and equipment.

Filta-Guard™

High-efficiency

The high-efficiency Filta-Guard is a dedicated breathing filter designed for use in breathing systems in anesthesia and intensive care, for the protection of the patient, hospital personnel and the equipment from potential microbial contamination. The Flow diffuser improves performance and optimizes resistance to flow.

Heat and Moisture Exchangers (HMEs)

In normal respiration, the anatomy of the upper airway helps to warm and humidify inspired air, and to retain the warmth and moisture contained in expired air. During inspiration, even cold or dry air is typically heated to 37 °C and fully saturated, contains 44mg H₂O per liter. In mechanical ventilation or anesthesia, the patient's upper airway may be bypassed by the introduction of a tracheal tube. As a result, the patient's lungs may be confronted with cold, dry, inspired gas.

Prolonged exposure to dry ventilatory gases can lead to:

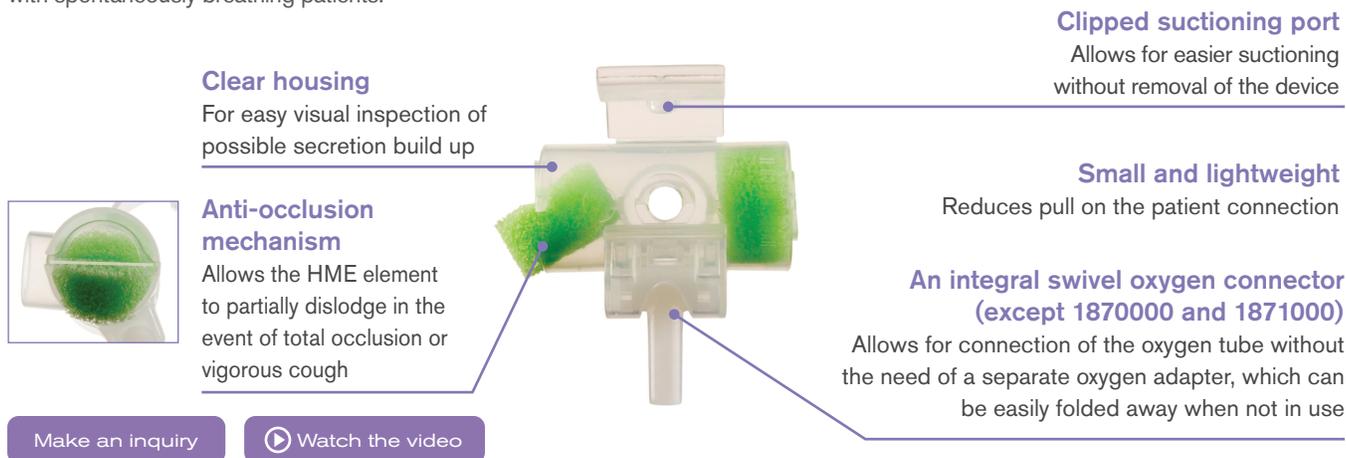

- Localized inflammation of the trachea
- A reduction in ciliary function
- Retention and thickening of secretions
- Lowering of patient temperature
- Reduction in cardiopulmonary function
- Increased risk of tracheostomy tube occlusion
- Extended duration and cost of care

Respiratory epithelium adversely affected by heat & moisture loss

Hydro-Trach™ T range

A heat and moisture exchanger designed for use on tracheostomized patients. The Hydro-Trach T is an ideal product for prolonged use with spontaneously breathing patients.

An integral swivel oxygen connector (except 1870000 and 1871000)

Allows for connection of the oxygen tube without the need of a separate oxygen adapter, which can be easily folded away when not in use

Inter-Therm™ T+

The Inter-Therm T+ is a heat and moisture exchange device designed for use with spontaneously breathing patients to reduce loss of heat and moisture during respiration.

When a patient has a tracheostomy, the normal process of temperature and moisture maintenance is bypassed by the insertion of the tracheal tube. The possible loss of heat and moisture can lead to serious complications, notably damage to cilia and the mucous glands.

This in turn may result in retention of sputum and atelectasis, production of mucous plugs and potential tube occlusion.

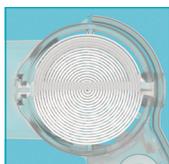

The Inter-Therm T+ has a number of unique features that make it an ideal product for prolonged use with spontaneously breathing patients.

Clipped suction port

Allows easy access for suctioning without removing the device

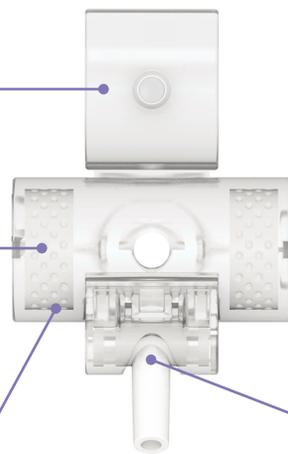

Clear housing and white HME elements

Optimizes visualization of possible pulmonary secretions

Unique corrugated paper design

Provides perfect combination between humidification output and low resistance to flow

Small and lightweight

Reduces pull and drag on the patient's airway

Optimal humidification

Reduces the side effects associated with breathing cold dry gases over a prolonged period of time

Integrated swivel oxygen connector

Allows for quick and convenient connection of supplemental oxygen and can be folded away when not in use

Inter-Therm™ T HME

The Inter-Therm T is a heat and moisture exchange (HME) designed for use with spontaneously breathing patients in order to reduce loss of heat and moisture during respiration, ideal for patients and clinicians caring for patients living with a tracheostomy.

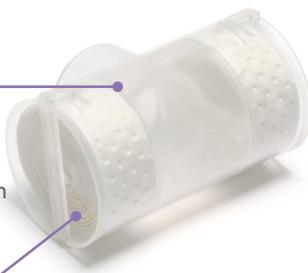

Clear housing and white HME elements

Optimizes visualization of possible pulmonary secretions

Unique corrugated paper design

Provides a perfect combination between humidification output and low resistance to flow

Small and lightweight

Reduces pull and drag on the patient's airway

Optimal humidification

Reduces the side effects associated with breathing cold dry gases over a prolonged period of time

Code	Description	Qty.

Hydro-Therm™ Micro HME

In normal respiration the anatomy of the upper airway helps to warm and humidify the inspired air, and to retain the warmth and moisture contained in the expired air. During inspiration, even cold or dry gas is typically heated to 37°C and when fully saturated contains 44mg H₂O per liter. In mechanical ventilation or anesthesia, the patient's upper airway may be bypassed by the introduction of an artificial airway. As a result, the patient's lungs may be confronted with cold dry inspired gas. The side effects of this are well documented and include damaged cilia, thicker mucous, increased risk of tube occlusion and infection.

The Hydro-Therm Micro is a small volume, lightweight HME designed to replicate the functions of the body's upper airway by conserving expired heat and moisture and returning to the patient during inhalation.

The Hydro-Therm Micro is suitable for use on neonates and infants with a tracheostomy or for short term procedures and during transport.

Small and lightweight

Reduces the risk of inadvertent pull and drag on the patient's airway

Moisture return

Tested in accordance with ISO 9360, delivers a moisture return of 29.5mg H₂O/L

Low compressible volume

Reduces deadspace and potential rebreathing of expired Carbon Dioxide

Safety by design

Safely secures the position of the media throughout use

Low resistance to flow

Minimizes the work of breathing

Suitable for use on neonatal and infant patients

With a tracheostomy, during transport or short procedures

Larger surface area of HME media

The open celled foam HME maximizes moisture return with a low compressible volume

Safe and secure connections

Tapered connections, compliant with ISO 5356

Smoothbore tubing

Our Smoothbore tubing incorporates flexible connectors at the machine end. This feature helps to eliminate the possibility of any leaks or disconnections. The smoothbore tube option gives improved ventilatory support with the following benefits and advantages:

- Improved flow characteristics
- Minimal water collection within the system and improved drainage
- Clear crush-resistant tube
- Soft flexible end connectors to accommodate non-standard fittings

Intersurgical® 5191000

ClearLite™ anesthetic masks

A range of anesthetic masks which includes seven sizes to meet the clinical needs of most patient types and sizes. The range is available in sizes 0 neonatal to size 6 extra large adult. Due to the enhanced anatomical design, the ClearLite mask offers superior seal performance with minimal pressure, reducing the risk of unnecessary discomfort or potential trauma.

The superior seal will also assist the clinician in providing optimum manual ventilation of the patient in both the anesthetic and emergency situation.

ClearLite is non PVC and phthalate free which significantly minimizes the impact upon the environment. 

Lightweight mask

Provides enhanced grip and comfort in use for the clinician

Anatomical shape

Provides a precise fit for different face types and sizes. Minimal pressure is required to achieve an effective seal reducing the risk of inadvertent trauma and nerve damage

Crystal clear body

Provides excellent visibility for confirmation that the patient is well perfused

Reduced mask volume

Reduces potential rebreathing and risks associated with elevated levels of end tidal CO₂

Safe and secure connection

This is achieved between the mask and the breathing system in use. The ISO 22mm tapered connection complies with ISO 5356

Flexible non-inflatable cuff

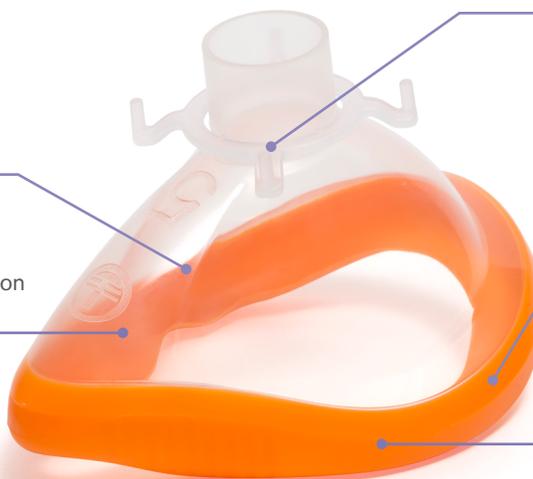

Provides a comfortable and effective airtight seal

Color-coding

The comfortable, flexible seal is color-coded to allow quick and easy identification of the correct sized mask

Low environmental impact

Non PVC and phthalate free

Reduce the pressure

Intersurgical has two products to reduce the occurrence of pressure ulcers on the ear

Intersurgical EcoLite™ oxygen masks

Intersurgical EcoLite oxygen masks featuring:

- Under ear elastic position eliminates trauma to top of ears
- Soft face seal
- Light weight

Intersurgical EarGuards™ adult nasal cannula

Nasal cannula with Intersurgical EarGuards featuring:

- Soft silicone foam cushions
- Easily adjustable
- Securely fitted
- Non-allergenic

Find out more

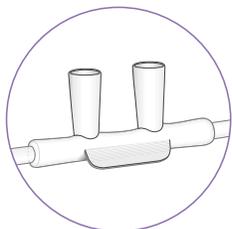

Nasal cannulas

Conventional nasal cannulas

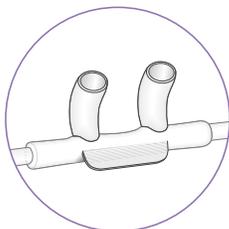

A range of products for adult, pediatric and neonates are available with a wide selection of prong shapes to suit most patient requirements. All oxygen tubing in the range is manufactured in a 'multi-channel' design, which permits oxygen flow even if the tubing is 'kinked'. The Intersurgical EarGuard™ option includes soft silicone foam cushions, which are easily adjusted and securely fitted to prevent trauma to the patient's ears.

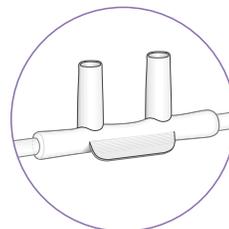

Curved prongs:
Improved anatomical shape and fit

Flared prongs:
Slow down the flow of oxygen

Curved and Flared prongs:
Combines the benefits of both

Straight prongs

Curved prongs with Intersurgical EarGuards™:
Improved anatomical fit and patient comfort

Code	Description	Tube Length	Qty.
1161000	Adult, nasal cannula with straight prongs and tube	1.8m	50
1163000	Pediatric, nasal cannula with curved prongs and tube	2.1m	50
1164030	Neonatal, nasal cannula with curved prongs and tube	2.1m	50
1165002	Intersurgical EarGuard™, adult, nasal cannula with curved prongs and tube	2.1m	50
1165000	Adult, nasal cannula with curved prongs and tube	1.8m	50
1166000	Adult, nasal cannula with flared prongs and tube	1.8m	50
1167000	Adult, nasal cannula with curved/flared prongs and tube	1.8m	50

 Phthalate free pediatric, infant and neonatal options

Intersurgical EcoLite™ adult medium concentration oxygen mask

Welcome to the Comfort Zone

The unique design and materials used to manufacture the Intersurgical EcoLite mask provides improved patient comfort and a reduced environmental impact.

Comfortable for the Patient

Improved patient comfort has been key to the development of the Intersurgical EcoLite mask. The latest manufacturing technology has enabled us to combine two non-PVC materials in the same product. The polypropylene material forming the body of the Intersurgical EcoLite mask is clear, lightweight and rigid enough to maintain the mask's shape. The second softer thermoplastic elastomer (TPE) material is utilized in the seal which is in contact with the patient's face.

Comfortable for the Environment

The Intersurgical EcoLite mask is an important part of our Eco range, designed as part of our ongoing focus on sustainable development. The use of PVC in medical products has been questioned and its impact on the environment. The utilization of alternative materials has resulted in the elimination of PVC from the Intersurgical EcoLite mask, reducing the environmental impact.

Lower environmental impact product

Oridion and Microstream are registered trademarks of Oridion Medical 1987 Ltd.

Sentri™ Intersurgical EcoLite™ ETCO₂ mask

The Sentri ETCO₂ mask is a conventional medium concentration oxygen mask with the addition of a sampling port. This permits sampling of exhaled carbon dioxide from both the mouth and nose in non-intubated patients during the administration of supplementary oxygen.

Capnography is vital during sedation

The increased use of conscious sedation has created a need for a device to monitor respiratory depression. The difference between conscious sedation and general anesthesia is sometimes very small. It is possible during conscious sedation that intravenous sedatives and narcotics administered to allay apprehension can result in the loss of consciousness and respiratory obstruction. The Sentri mask is simple to use: attach one end of the ETCO₂ monitoring line to a 'sidestream' capnometer and the other to the female luer lock port on the mask.

 Lower environmental impact product

MultiOx™ venturi mask kits

The MultiOx adjustable venturi valve offers seven oxygen concentrations. A large body diameter provides space for clear, widely-spaced calibration and incorporates a 'pull-twist' action preventing accidental adjustment. The one-piece design eliminates the need to use more than one valve for all concentrations and contains no separate pieces that may get lost or mislaid.

The concentration delivered is unaffected by the patient's breathing pattern provided that the optimum flow indicated on the valve is set on the oxygen flow meter.
